

# MACHINE DRIVE

## FOR H<sub>2</sub>O<sub>2</sub> DISTRIBUTOR

To improve the reliability of our equipment and to meet our customers requirements SIG redesigned the drive section of the H2O2 distributor.

The conversion kit replaces the existing rotating cylinder with a linear cylinder which primarily improves the adjustability of the drive unit while minimizing the possible risk of leaks, which could cause a reduction in power during operation.

Coincidentally the improvements also have a positive impact on service life.

- ✓ **PERFORMANCE IMPROVEMENT**
- ✓ **IMPROVED SERVICE LIFE**
- ✓ **IMPROVED ADJUSTABILITY**

### ANY QUESTIONS?

FOR FURTHER INFORMATION PLEASE DO NOT HESITATE TO CONTACT YOUR LOCAL SERVICE CONTACT

### HOW IS IT REALISED?

THE INSTALLATION OF THE CONVERSION KIT REQUIRES APPROX. 5 HOURS.
